The Strategy and Policy Division delivers whole-of-government economic development policies, strategies and projects. The key focus of the Strategy and Policy Division is to inform and influence government decision-making and implement strategies to drive economic reform, industry development, strategic trade and investment. The division works collaboratively with other NTG departments to ensure consistency.

The Tourism, Services and Hospitality division is responsible for promoting the Northern Territory as a must-do, unique holiday and study destination. The team also works to strengthen the workforce by delivering industry development for the tourism, hospitality and screen sectors. The team is also responsible for delivering appropriate licensing regulation.

The Agriculture, Fisheries and Defence division is responsible for supporting and protecting the Northern Territory's agriculture and fishing industries and provides information on defence projects and presence. This division has important linkages to other sectors of the economy, including retail and wholesale trade, manufacturing and transport.

The Mining and Energy division facilitates the sustainable development of Territory resources and renewable energy initiatives. The division delivers the NT Government's commitment to reduce energy costs, improve energy reliability and reduce emissions from power generation. The division plays a crucial role in developing and delivering the Northern Territory's energy policy and regulation requirements.

The Business and Workforce division works with local businesses and organisations to upskill and train current and new employees. The division delivers practical tools to help local businesses and organisations plan, start and grow. A range of funding and grants are available to support local businesses.
