

# NT labour market brief – November 2020

## Key message

There were mixed signals in the Territory labour market in October 2020, with increased full-time employment and a larger than expected fall in part-time employment contributing to an increased unemployment rate. Increased job vacancies suggests employment growth in the short term. Monthly data remains volatile and should be interpreted with caution.

### Notes

1. Original data.
2. Caution should be exercised in the use of this data as training data has a natural lag (up to six months after the commencement date) and are subject to future revisions.
3. It should be noted that this table provides trend data.
4. It should be noted that Darwin and regional NT data are original data with a three month rolling average.

Employment figures refer to Territory residents that are employed and do not capture persons working in the Territory that normally reside outside the Territory.

All data referred to in the brief are in seasonally adjusted terms, except for the apprentice and trainee data, which are in original terms and the regional breakdown of job vacancies.
